

Connecting Labcraft to their customers

LABCRAFT AND THE OLYMPIC HIGH STREET MAKEOVER

Leyton High Road, just round the corner from the Olympic Park, has undergone a remarkable transformation in time for the start of the Olympics. The shop fronts, cafes and restaurants have either been repainted in a sophisticated palette of colours or had the brickwork cleaned up, and the attractive hand painted signs are tastefully illuminated.

The project was awarded to Jan Kattein Architects, who were asked to create a contemporary retail environment, and they have been working together with Labcraft for their lighting requirements.

The Labcraft 96-LED Orion strip light was chosen for illuminating the shop front signage for a number of reasons. LEDs are not only better for the environment, they offer a cleaner and more directional level of light which gives a higher standard of illumination. The Orion LEDs last over 10 times longer than traditional fluorescents, thereby considerably reducing replacement costs, and as LEDs use less power, electricity bills will also be lowered for the shop owners.

LABCRAFT HELP THE PEOPLE OF MONGOLIA

Labcraft are pleased to be a part of the Mongol Rally this year by donating the interior lighting and LED Worklites for a working Mercedes Benz ambulance.

The rally is an annual charity motor rally that sees 100's of teams attempt to drive from the UK to Mongolia in any vehicle that would be useful to the people of Mongolia.

The Swedes, two (not so) ordinary fellas from Sweden, are attempting to deliver the ambulance to a hospital in Mongolia - we wish them the best of luck.

Labcraft distribution expands through Europe, into the Czech & Slovak Republic

Labcraft are proud to announce that, after successfully working together for over a year, F D Servis Praha are Labcraft's designated distribution partner for the commercial vehicle industry in the Czech and Slovak Republic.

Specialising in ambulance cars, commercial vehicles and specialist purpose built vehicles, F D Servis Praha are dedicated to the manufacture and assembly of individual components through to the complex turnkey solutions.

For more information on F D Servis Praha visit www.fdservispraha.cz

Increase efficiency and save money with the LED Scenelite

The Labcraft LED Scenelite is perfect for mounting as a rear external lighting source to illuminate the tail lift and the rear back doors of your vehicle.

The unique design of the Scenelite creates a wide arc of working light which makes loading and unloading much quicker and easier, especially at dusk through to dawn when available light is at a minimum (particularly during the winter months),

thereby increasing efficiency.

You can also save money by fitting the LED Scenelite as it has a 60,000 hour life expectancy, also supported with a 3 year guarantee, therefore there are no costly replacements or labour charges to consider.

Contact Labcraft for your free sample and on-site demonstration.
