

JUNE 2015

Take a look at our new website www.labcraft.co.uk

We are delighted to announce the launch of our new website. After listening to customer feedback we have worked hard to deliver a site that represents our core values and ethos, and provide further insight into our design and manufacturing capabilities.

With our design team working tirelessly to update our existing range whilst developing new and innovative products, it's important, within this fast moving environment, that this new information is readily available and easily accessed. We are committed to keeping our site up to date to help customers make informed decisions about choosing their low voltage lighting supplier, and welcome all feedback as to how we can enhance the site further to benefit our customers.

Labcraft: UK Design & Manufacture

At Labcraft, we design and manufacture our entire LED lighting range in our own factory in the East of England. By maintaining full control over every aspect of the product from initial concept stage to full production, we can guarantee both the quality and consistency of every product that bears the Labcraft name.

The direct benefit to customers is that, with Labcraft's market leading 10 year warranty, they have chosen a true "fit and forget" lighting solution.

We are proud of our reputation for high quality products and actively encourage our customers to visit our facility to see us in action. So if you would like to come and see what makes us different from other LED lighting suppliers, just call Louise in Customer Services to arrange a visit; we'd be very pleased to see you!

Labcraft LED lighting has been given the thumbs up on a second project by the RAYNET organisation. The latest project was to upgrade the lighting in their broadcasting trailers, and, after experiencing previous problems with lights sourced from the Far East, Raynet went in search of a reputable UK manufacturer. They were impressed with Labcraft's LED specifications, together with the robustness and IP67 rating of the lights. Mark Jones, County Controller, expressed his thanks to everyone at Labcraft for an excellent product range and customer support.

The new Novalux LED lighting range is launched by Labcraft

The latest new product from the Labcraft Design team is the Novalux interior light.

The Novalux utilises the latest Cree LED devices to create 320 lumens of light, delivering over 170 lux @ 1 metre. It's the ideal light for use wherever a bright, clean light is required in applications where there is limited mounting space.

320 lumens

This product is available in both a switchable surface mount and slim profile IP66 recessed versions. Both versions are multi-voltage and benefit from Labcraft's market leading 10 year warranty.

>170 lux
